REPORT OF THE TRUSTEES.

CITY HOSPITAL, BOSTON, Dec. 31, 1888.

To the Honorable City Council:—

The Trustees of the City Hospital, in compliance with the Ordinances, respectfully present herewith their Annual Report for the year 1888:—

NUMBERS AND EXPENSES OF PATIENTS.

Number of patients remaining in the Hospital	
Dec. 31, 1887	352
Admitted during the year:—	
Medical	3,253
Surgical	2,543
Ophthalmic	79
	<hr/> 5,875
Treated during the year	6,227
Discharged	5,110
Died	772
	<hr/> 5,882
Remaining in Hospital Dec. 31, 1888	345
Largest number of patients in Hospital at any one time	441
Smallest number of patients in Hospital at any one time	320
Daily average number of patients	378 +
Average length of stay of each patient	22.21 days.

Number of patients treated in the Out-patient Department,
classified according to their diseases : —

Medical diseases	2,991
Surgical “	5,910
Diseases of the Eye	1,600
“ “ Ear	405
“ “ Skin	878
“ of Women	438
“ “ the Nervous System	545
“ “ the Throat	616
<hr/>	
Total number of out-patients	13,383

Number of visits by patients to the Hospital, classified
according to diseases : —

Medical diseases	5,031
Surgical “	23,293
Diseases of the Eye	7,653
“ “ Ear	1,811
“ “ Skin	2,077
“ of Women	1,075
“ “ the Nervous System	1,772
“ “ the Throat	2,128
Surgical out-patients treated at accident-room, and not elsewhere included	1,243
<hr/>	
Total visits of out-patients	46,083

The report of the Superintendent, presented herewith, contains, besides other information, a detailed statement of the expenditures of the year and of the number of patients admitted, and is accompanied by the reports of the medical and surgical staff. These reports give in detail the number of patients treated in the Hospital, and the number treated in the Out-patient departments, during the year, with classified statements of their diseases and the results of treatment.

The whole number of patients in the Hospital during the year was 6,227, and they were under treatment an average

of $22\frac{21}{100}$ days each, making a total of 138,301 days, or 19,757 weeks. The entire cost of maintaining the Hospital during the year was, at the rate of \$10.28 per week, \$203,206.46. Deducting from this total the amount received on account of the board of paying patients, \$27,946.14, there is left the sum of \$175,260.32 as the cost to the city of treating the non-paying patients. But after further deducting stock on hand and extraordinary expenses, such as alterations and additions to steam-heating apparatus, extraordinary painting and plumbing, new garbage house, etc., not properly included in the maintenance for the year, the net cost of maintaining the Hospital was, for the year, \$156,439.49, or an average cost to the city for board of each patient treated of \$7.91 per week.

The number of patients under treatment was 6,227, being 290 greater than during the preceding year. This is the largest number of patients treated during any year since the establishment of the Hospital. The largest number of patients in the Hospital at any one time in the year was 441; the smallest number at any one time was 320; the daily average number of patients was 378+; the average length of stay of patients was $22\frac{21}{100}$ days. During the year 7,406 applicants were examined for admission, of whom 5,875 were admitted and 1,531 were rejected. The various causes for rejection appear in the Superintendent's report.

The average net cost per patient per week for the year 1888 was \$7.91 against \$7.41 for the year 1887, \$7.52 for the year 1886, and \$8.39 for the year 1885.

The income to the Hospital during the past year was			
From board of paying patients	.	.	\$27,946 14
From interest from trust funds	.	.	1,550 00
From sale of old materials	.	.	276 43

Making the total income for the year, which
 was paid into the city treasury, . . . \$29,772 57

The constant increase in the number of patients, the larger number of serious and complicated accidents, the

more extended classification of diseases, the improved appliances and methods of treatment, necessitate both larger appropriations and larger percentages of expense.

The proper care of the sick makes demands upon the city which are immediate and imperative. The Hospital has so grown in its capacity, and the demand for still increased and more effective work is such, that former estimates must be set aside, and the amount given for this department must be considerably larger, not only for one year, but for all years as long as the Hospital does the amount of work now rendered to the public.

PAYING PATIENTS.

The income from paying patients was \$27,946.14. The greater part of this sum was received from other cities and towns for the board of those who have no settlement in this city, and who, by accident or temporary residence, demand hospital care. Considerable sums are received from those who would naturally come to this Hospital, but who desire better accommodations than the public wards afford, and who are willing to pay for such additional conveniences. Comfortable accommodations in private rooms can be had at fifteen, twenty, and twenty-five dollars per week, according to the size and location of the rooms furnished. There are a few isolated rooms, where accommodations are given to two or three in the same room, at ten dollars per week, but fifteen dollars is the minimum price at which private patients are received.

HOSPITAL REPAIRS AND RENEWALS.

Much work has been done during the past year on account of repairs and renewals. As was pointed out in the last report, the heating apparatus of the Hospital required extensive and radical changes. These were necessary, because the plant put in in 1876 was never satisfactory, and was also badly out of repair. The additional buildings erected being heated by the same system taxed the apparatus beyond its capacity. During the past summer the Trustees have expended upon this work the sum of \$6,331.56. A radical

change was made. The "return pipes" were all changed, and the greater part renewed; new receiving tanks were put in, new pumps added, all steam traps were removed and a newer pattern supplied, and the large chimney to boilers was enlarged and built forty-five feet higher to increase the draft of the boilers; additional radiators were placed under some of the wards more remote from the boiler-house, and additional air-flues constructed. The result of these changes has been that the Hospital in nearly all its parts has been warm during the entire winter, and no reasonable complaints have been made. For several winters past it had been impossible to keep certain wards and rooms warm, and there was no practical remedy except by the renewals and changes made. Observations have been regularly kept in the wards, and the result has been gratifying in the uniform temperature maintained, while at the same time a constant supply of fresh air has been afforded.

Some further changes and additions are needed during the coming year to complete the scheme of improved heating apparatus, but much less expensive than those already made. In addition to steam-heating, a large number of fire-places have been utilized, assisting in ventilation, and giving a cheerfulness and comfort to such patients as were able to be out of bed.

Considerable new work has been done in the Hospital plumbing. In the new medical building an entire stack has been torn out, and all work and fixtures have been made anew and on improved patterns. Wards P and T have received the same alterations, and all the work has been of a thorough kind. Much old work remains that has been subjected to hard usage for twelve years, which is not in accordance with the present building laws, and should be replaced by new work.

Wards B, N, K, L, and the operating theatre have been vacated during the summer months, and entirely renewed by repairs, re-coloring and painting and renovating of floors. The outside wood-work of six buildings has been repainted, and various rooms used for official or domestic purposes, including corridors and stairways, have been subjected to the

usual course of repairs. The good sanitary condition of the Hospital is due, in a large measure, to this systematic treatment of the wards and rooms, which is demanded in a much greater measure than in mercantile or ordinary public buildings.

OUT-PATIENT DEPARTMENTS.

The out-patient departments remain in the same quarters as last year, but with the occupation of the new out-patient building, now in the process of construction, much relief is expected. It will enable the Hospital to do more and better work, with much greater convenience to the medical staff and comfort to the patients. The building is now under cover, and as good progress has been made as could be expected under the circumstances. When this building is completed, the entrance to the Hospital will be changed to the corner of Harrison avenue and East Springfield street, and it will be more convenient and more in keeping with the character and importance of the Hospital.

THE NEW WARDS FOR CONTAGIOUS DISEASES.

In February the new wards were opened for the reception of diphtheria and scarlet fever. These buildings, as was predicted in the report of last year, have done much, directly and indirectly, to enable the hospital better to care for these diseases, and have done away with sources of danger previously irremediable. The Trustees believe that it would be difficult to find wards better suited to the purposes for which they are now used. It remains, however, a very questionable measure to treat infectious diseases in connection with a large and general hospital. This matter is dwelt upon at further length in the Superintendent's Report, and is worthy of attention. A few isolated cases of contagious diseases have occurred in the general wards. Such cases are liable to occur in any large hospital, with four hundred and eighty beds for general diseases, occupied by patients coming from all quarters of a large city. In fact, infectious cases arise

in the wards of nearly all hospitals where contagious diseases are received. It is a very difficult matter to trace the origin of such diseases, and a critical public is apt to connect their inception with the proximity to wards for contagious cases, whatever their source may be, or however strictly the regulations against the introduction of causes of contagion may be enforced in the management of such wards. The laws relating to the isolation of infectious diseases in Great Britain and other European countries are so much more strict than in the United States, and the professional and public sentiment is so far in advance of that existing in this country, that the care of contagious and general diseases in the same hospital grounds would hardly be permitted. The Trustees, therefore, suggest the consideration of establishing a group of wards in some outlying and isolated locality within the city limits, which shall constitute a hospital for contagious diseases, such, for instance, as now exists in Glasgow, Scotland. Such a necessity is probably only a matter of time, and it must come with a better understanding, on the part of the public, of the subject and its complications. Such a hospital should be under the charge of a Board which should have the power, under present or more stringent laws, to enforce the isolation of all infectious diseases injurious to public health.

PRESENT CAPACITY OF THE HOSPITAL.

The capacity of the Hospital is four hundred and eighty beds, the same as last year. This capacity will probably be slightly increased as soon as the new out-patient building is ready for occupancy. Plans have been made for sleeping accommodations in that building for twenty-six male employés, and several of the rooms now occupied by them may be used for isolating special cases.

ADDITIONAL LANDS.

The original lot of land assigned for the use of the City Hospital is now all occupied by buildings except that portion devoted in the summer months to the tent service, and a

small portion now used as a yard for laundry purposes. This remaining space might possibly be used, as the Hospital becomes further crowded, for one or two small Hospital buildings; but extensive vacant space is now considered one of the essentials in Hospital construction. The Nurses' Home occupies a part of the land belonging to the city, which is situated in the block between East Springfield street and East Chester park; but the rest of the city's land in this block is badly located for other Hospital use, as it is separated from the rest of the Hospital buildings by East Springfield street. This land can only be made desirable or available by obtaining possession of all the rest of the block which abuts on East Springfield street, so that the city may close East Springfield street, and bring the whole into common use with the present grounds.

This recommendation has previously been made, as will be seen, by reference to previous annual reports (see 1882, City Doc. No. 82, p. 8; and 1886, City Doc. No. 97, p. 24). When the Hospital was established there was given it a large plot of land between Albany street and the wharf, on which were located the Small-pox Hospital and the hospital coal-sheds. In course of time the Small-pox Hospital was abandoned, and the present one established in West Roxbury. The system of direct purchase and storage of coal was discontinued. The City Council later transferred a part of this land to the Water Department, and leased another portion to private parties, reserving only a small corner for the present stable. The Water Department has again given another portion of this land, which was demanded by its own increasing needs. The Trustees recommend that the City Council, when the present lease to private parties has expired, transfer to the Trustees that portion in the rear of its present stable. On this they desire to place a new stable, and a small building to be used as a laboratory, where all inflammable or dangerous ingredients are used in the manufacture of surgical dressings. They also recommend that a part of the coal-sheds be used for the storage of coal, so as to enable the Trustees to purchase coal direct from the mines, and thus free the City

Hospital from subjection to such combination as has existed during the past year. Further space is also needed as a storage yard for unsightly and offensive materials. This arrangement would enable the city to transfer to the Water Department about 6,000 feet of land now used by the hospital, contiguous and symmetrical with their present premises. It is by reason of these desired changes that the Trustees have not renewed their application, made for several successive years, for an appropriation for a new stable, but request the attention of the City Council to this subject.

ROOM FOR A MEDICAL LIBRARY.

The central or administration building was never well arranged for administration work, however imposing or effective it may be in its exterior. This want of adaption becomes very marked now that the Hospital has grown to nearly five hundred beds.

The Hospital in its early history laid the basis for a good medical library, and gradual additions have been made by purchase and donation until there are now many hundreds of books and pamphlets on medical science. A few of these books are on the shelves in the reception-room of the central building, where general visitors are received, but the greater part are stored in dark rooms and closets, and are not available for use. The reception-room is poorly adapted as a place for a working library. There is no space or opportunity for arrangement, or even room for shelving, and it is not a suitable room in which the Staff or others can use the books for reference or study. The record books, containing the written histories of nearly 100,000 patients, now number several hundred volumes, and are of great value as a basis for medical investigations. These records are necessarily placed in a small, damp room in the basement of the central building. It is desired to bring both library and records into close proximity in a place safe against fire and deterioration, and, under conditions of retirement, to increase opportunities for study and reference. There is no room in the already crowded Hospital available for such purposes,

and the public reception-room is the only place where the Medical and Surgical Staff can hold their meetings. The Trustees propose that a supplementary building, of moderate dimensions, be constructed in the rear of the present administration building, which shall contain a room for a medical library, a room for medical records arranged for the purposes of a library and a staff assembly room. Such a building, one and a half stories high, sixty feet long by forty feet wide, fire-proof and suitably arranged, could be built for about \$18,000. The basement could be used for dining-rooms for officers, and also have a room to contain the library for patients. The proper placing and arrangement of the medical library is urged upon the Trustees, not only because it has been a long-desired object, but because the Hospital is about to have a legacy, under the will of Mary G. Perkins, of \$7,500, one-half of the interest of which the donor desired should be devoted to the purchase of books for the Hospital medical library. The Goodnow library fund has accumulated interest money amounting to \$719, the investment of which has been delayed by the want of a suitable room for the patients' library. The Trustees recommend that \$18,000 be appropriated for the construction of such a building, thereby relieving the combination of wants described.

ELECTRIC-LIGHT PLANTS.

The Trustees recommend to the City Council the building of an electric-light plant. This matter has been before them for discussion for some time, but they have refrained from presenting it on account of the many calls upon the treasury for money in the city expenditures. They now feel that the time has come to ask for this improvement. The matter is more fully discussed in the report of the Superintendent, and is worthy of consideration. Electric lighting is specially needed in a hospital, since it is a matter of economy, is eminently beneficial to the health of the patients, reduces the risk of fire, always a calamity to be dreaded in a hospital filled with helpless people, and serves as an assistance in many departments to better service. The Trustees earnestly

invite the attention of the City Council to this needed improvement.

THE TRAINING-SCHOOL FOR NURSES.

The Training-School for Nurses needs no special comment. This branch of the Hospital service has done excellent work. There are now seventy-four nurses of all grades, and twenty-two have received diplomas as graduates during the past year. During the year the course of study has been somewhat elaborated and systematized, and supplemented by additional facilities for training. In addition to the diploma a badge for graduates has been established, to identify those who merit the honor of having received their training in the Hospital, and for whom, in a sense, the Hospital is responsible. This school deserves the fostering care of its guardians, and it is intended that, so far as possible, those only who are efficient and worthy for such work shall be permitted to graduate from this school to engage in the responsible calling of a nurse.

STAFF CHANGES.

The changes in the visiting staff were few during the year. James H. Denny, M.D., Visiting Physician, resigned. The Trustees decided to reduce the number of visiting physicians from ten to nine, thus making it unnecessary to elect another. At the close of the year the Trustees created an aural service, for the treatment of indoor patients with diseases of the ear. J. Orne Green, M.D., for many years physician for diseases of the ear to out-patients, was elected Visiting Aural Surgeon. W. E. Boardman, M.D., physician for diseases for women to out-patients, resigned. Francis H. Brown, M.D., physician for diseases of the ear to out-patients, resigned. The title of physicians for diseases of the ear to out-patients was changed to that of aural surgeons to out-patients. George A. Leland, M.D., and Edward D. Spear, M.D., were elected to those positions. Myles Standish, M.D., assistant to the ophthalmic surgeons, resigned, and Henry W. Kilburn, M.D., was elected to the vacancy.

H. F. Sears, M.D., was elected to the office of Assistant Pathologist.

The Trustees gratefully acknowledge the valuable and gratuitous labors of the Medical and Surgical Staff in the faithful performance of their arduous duties, by which the most destitute of the city's inhabitants have in their sickness been afforded the highest professional skill and experience.

EXECUTIVE OFFICERS AND EMPLOYÉS.

The work of the year has been of more than usual importance in the number and character of the cases treated. The successful and judicious administration of an institution with an average of nearly four hundred patients, and in all more than six hundred people, requires good administration, adjusted to make all departments work harmoniously and faithfully. The results of the year have been satisfactory to the Trustees, and they believe that the present excellent condition of this Hospital, in the perfection of its arrangements and appointments, as well as the good character and discipline of its service, will compare most favorably with any of the general hospitals, and that it stands foremost among American municipal hospitals.

The Trustees acknowledge the excellent work done by the Superintendent, Dr. Rowe, and his appointed heads of departments, for their part in the success of the year. Their responsibilities have largely increased with the marked growth of the Hospital. The nurses, employés, and attendants have, as a rule, been faithful in their work, which is of a kind requiring great forbearance and physical strain.

The Trustees gratefully acknowledge the thoughtful interest of friends who, in many ways, have contributed gifts, and given personal attention to the sick under their charge. They hope for a continued assistance in this direction, believing that no class of our community is more worthy of such attention and sympathy.

Respectfully submitted for the Trustees, by
HENRY H. SPRAGUE,
Secretary.

REPORT OF THE SUPERINTENDENT AND RESIDENT PHYSICIAN.

CITY HOSPITAL, Dec. 31, 1888.

To the Board of Trustees: —

GENTLEMEN, — I have the honor to present herewith my Annual Report of the Hospital for the year, January 1 to December 31, inclusive.

The following table shows the number of patients who have each year applied for admission, and been treated at the Hospital: —

	Patients examined for ad- mission.	Patients admitted.	Patients accident- ally injured.	Number of out- patients treated.
From June 1, 1864, to December 31, 1864	703	475	129	371
From January 1, 1865, to December 31, 1865.....	1,451	1,066	242	1,143
From January 1, 1866, to December 31, 1866.....	1,749	1,432	345	3,324
From January 1, 1867, to December 31, 1867.....	1,913	1,534	328	7,015
From January 1, 1868, to December 31, 1868.....	2,729	2,078	417	8,794
From January 1, 1869, to April 30, 1870	4,632	3,054	482	11,791
From May 1, 1870, to April 30, 1871.....	3,977	2,396	525	8,899
From May 1, 1871, to April 30, 1872.....	4,387	2,873	565	8,947
From May 1, 1872, to April 30, 1873.....	4,326	3,304	660	7,526
From May 1, 1873, to April 30, 1874.....	4,250	3,201	804	9,272
From May 1, 1874, to April 30, 1875.....	4,652	3,424	756	8,732
From May 1, 1875, to April 30, 1876.....	4,434	3,180	689	9,413
From May 1, 1876, to April 30, 1877.....	4,713	3,580	663	8,526
From May 1, 1877, to April 30, 1878.....	5,068	4,034	604	9,658
From May 1, 1878, to April 30, 1879.....	5,285	4,323	734	10,419
From May 1, 1879, to April 30, 1880.....	5,444	3,995	505	10,309
From May 1, 1880, to April 30, 1881.....	5,781	4,418	553	10,605
From May 1, 1881, to April 30, 1882.....	5,842	4,107	567	12,035
From May 1, 1882, to April 30, 1883.....	5,991	4,423	666	17,174
From May 1, 1883, to April 30, 1884.....	6,152	4,780	531	14,241
From May 1, 1884, to April 30, 1885.....	6,072	4,831	676	12,005
From May 1, 1885, to December 31, 1885.....	3,965	3,229	562	8,271
From January 1, 1886, to December 31, 1886.....	6,086	5,046	757	12,733
From January 1, 1887, to December 31, 1887.....	6,682	5,577	790	13,124
From January 1, 1888, to December 31, 1888.....	7,406	5,875	709	13,383
Totals.....	113,690	86,235	14,259	232,710

The number of patients, classified according to their diseases, who visited the Hospital for advice and treatment in the out-patient departments, was as follows : —

Medical diseases, under charge of Drs. F. H. Williams, Buckingham, and Withington . . .	2,991
Surgical diseases, under charge of Drs. Burrell, Watson, and Cushing	5,910
Diseases of the Eye, under charge of Drs. H. W. Williams and Wadsworth	1,600
Diseases of the Ear, under charge of Drs. Spear and Leland	405
Diseases of the Skin, under charge of Drs. Wigglesworth and Tilden	878
Diseases of Women, under charge of Drs. Boardman and C. M. Green	438
Diseases of the Nervous System, under charge of Drs. Prince and Knapp	545
Diseases of the Throat, under charge of Drs. DeBlois and Hooper	616
Total	13,383

Net cost of maintaining the Hospital from Jan. 1 to Dec. 31, inc., 1888.....		50,952 79
		\$156,439 49

The foregoing statistics show that the total expenditure during the year has been \$203,206.46. This sum is reduced to \$186,161.30 by deducting from the total expenditure the cost of alterations and additions to steam-heating apparatus, extraordinary plumbing, new garbage house, and renovating wards, which are not chargeable to the current expenses of the Hospital. This amount includes every expenditure, and gives a cost of \$10.28 per week for each patient. If, however, we allow for the difference in stock at the beginning and close of the year, the income from paying patients, and the extraordinary expenses, etc., not chargeable to the maintenance for this year, we have as a *net cost* to the city of running the Hospital \$156,439.49, or *per capita* for each patient treated during the year, \$7.91 per week. The income from paying patients has been \$27,946.14, and the total income from all sources, \$29,772.57.

The largest number of patients on any one day was 441, against 392 last year; the smallest was 320, against 300 last year. The daily average was 378, which is 24 more than last year, and 10 more than two years ago. The average length of stay was $22\frac{21}{100}$ days.

The number of patients admitted with accidental injuries was 709. Of all patients admitted 514 died within 48 hours after admission. The rate of mortality was $12\frac{3}{10}$ per cent. If from the total number of deaths we deduct those brought to the Hospital in a dying condition, the annual mortality is reduced from $12\frac{3}{10}$ to $7\frac{3}{10}$ per cent.

The appropriation for this year will be barely enough to meet our wants, and many repairs contemplated must go over to another year. The amount asked for was reduced by \$8,655. Had the new buildings been occupied, as we had reason to expect, our appropriation would have failed.

During the year, 6,227 patients have been treated in the wards, 14,626 as out-patients, making a total of 20,853 who have received the benefit of the hospital during the year. Of 7,406 persons examined for admission, 1,531 have been rejected. Of the rejected applicants, the larger number, 527,

were not so seriously ill when first applying as to require admission, and were treated in the various out-patient departments. These departments are distinctively used as a relief to the wards, and are not, as in many hospitals attached to medical schools, as a "feeder" to the wards for clinical purposes. Of the number not admitted, 172 changed their minds for various reasons; 145 were referred to various other hospitals or institutions; 78 had no illness or were feigning it; 124 of those who applied should have been admitted, but we were compelled to reject them solely for want of room. The various other causes of rejection will be found in a classified table elsewhere. The question of responsibility in the rejection of applicants is often a delicate one, and requires much discrimination. Nearly all the other hospitals in this city are under private management, and are free to admit or reject such applicants as they deem best according to their practice. The opinion is more or less prevalent that this is a "free hospital" to any and all. It is not uncommon for persons to make journeys of considerable length, coming to the hospital with their luggage, expecting to be received because it is supported by tax-levy of the city. Large numbers apply here having exhausted all other resources, or having lived many months in various other hospitals, when their disease is beyond remedial treatment. Others, who are the victims of vice or the unfortunate prey of poverty, use every possible lever to open our doors. Complaints always have been made by the public because these applicants are not received, and always will be made until there is a more general apprehension of the true purpose of the hospital, and what constitutes a proper case, and the legal right for admission. The intent upon which the hospital was founded and maintained in its early history is spread upon the records of previous reports which are worthy of perusal by those interested. This hospital should not have open doors for every person, nor for all kinds of sickness, without reference to the merits of the case or the legal rights of the applicant. It should be maintained for the worthy sick of the city of Boston, and to them it should be easy of access, and is so with as little formality as possible.

The capacity of the hospital is now 480 beds, and can be increased during the summer months, by the 70 beds in our tent service, to 550 beds. We cannot be expected, according to present classification, to exceed 460 patients at any one time, because the summer tent service is used as a relief in successively vacating the wards, and it is hardly possible that every ward should ever be full, especially those for contagious diseases. The largest number during the last year on any one day was 441.

By previous reports, it appears that in

1883-4 the daily average was 286 and the largest number was	384
1884-5 the daily average was 306 and the largest number was	357
1885 the daily average was 315 and the largest number was	365
1886 the daily average was 344 and the largest number was	391
1887 the daily average was 354 and the largest number was	392
1888 the daily average was 378 and the largest number was	441

This shows that the proportion of available beds is kept more constantly full, that the ratio of "largest numbers" and "daily average" is constantly increasing. In five years the daily average has increased 92, or a yearly average of 18 patients. If this ratio of increase is maintained during the next five years, the daily average would reach 470 patients, demanding a possible capacity of 523 beds, which is greatly beyond our present limit or that which is within reasonable expectation. It must follow, therefore, that with the presumable increasing demands for beds, we must either have more wards, or the rejection of worthy cases must largely increase, resulting in greater hardship for the sick poor, and more criticism of the management. With an experience of ten years in the work and needs of the City

Hospital my judgment leads me to believe that the urgent demand for more beds, for ordinary medical and surgical cases, is close at hand. I therefore recommend to the trustees the early consideration of the expediency of asking the City Council for further appropriations for additional new wards for the non-paying class of patients and for the ordinary medical and surgical cases.

The number of patients who have died during the year was 772. The number of patients admitted with accidental injuries was 709. Of all patients admitted, 314 died within forty-eight hours after admission. This number is remarkable as showing the serious and fatal character of a large number of patients received, and indicates the character of our work. The rate of mortality is 12.3, which is the largest in the history of the hospital. If from the total of 772 deaths we deduct 314 who were brought to the hospital in a dying condition, and 176 who died of diphtheria, we have a remainder of 490 deaths, which is only .06 per cent. mortality. This shows that the large death-rate is mainly due to two classes of patients, as above-named.

The appropriation for the fiscal year will not be sufficient to meet our wants. Many contemplated and necessary improvements and renovations must go over to another year. During the past year many repairs have been made of an unusual character. The heating system, after thirteen years of service, has much deteriorated, and in some parts is radically faulty. By the settling of the buildings, the return-pipes in many instances were out of level, preventing the return of condensed steam; the receiving-tank was leaky and of an obsolete pattern, and the traps were of an old and disused pattern. Radical and complete changes were made to overcome these difficulties, and the aggregate expenditures on this class of repairs alone amounted to \$6,331.56. The present number of buildings has exceeded the intended capacity of the boiler-plant. Future enlargement of the hospital will demand an additional boiler-house, as our present one admits of no further extension. The alterations have proved of great benefit, and all parts of the

buildings have been kept at a proper standard of temperature for the first time in several years. The supply of fresh air has been made more abundant by using steam in all the aspirating shafts for the acceleration of the ventilation.

Considerable new work has been done in the plumbing in various parts of the hospital. The entire plumbing of five wards has been taken out and replaced by new fixtures. This, with renewals and general repairs in sundry other places, has amounted to \$1,826.12. Wards B, N, K, L, and the operating theatre, have been vacated during the summer months, and entirely renovated in the same manner as other wards before reported.

A new garbage house has been built, twenty by fourteen feet. The building is isolated, is thoroughly constructed, and is entirely lined by a substantial finish of Keene's cement, so that it may be flushed by water hose as frequently as necessary. The grounds adjoining the new wards and Ward K have been much improved. Over one thousand loads of gravel, loam, and sod have been put in, the grade raised, and new roads and paths constructed. This has been accomplished at comparatively small cost, the material coming from the land now occupied by the new building for the Out-Patient Department.

Among the matters long demanding improvement is a new fence around the hospital grounds bordering on Concord and Albany streets. The old wooden fence, originally built in 1864, is now dilapidated, sunken below the street grade, and useless as a protection to the grounds. This should be replaced by a substantial high brick-wall with a stone capping. Such a wall would cost more than could be spared from our regular appropriation, and I would suggest that a special appropriation be asked for that purpose. Only those familiar with the management of a hospital can appreciate the constant annoyance caused by want of proper protection to the grounds and buildings and the great detriment to discipline. Too free communication is now held between patients and unscrupulous passers by. The prevention of the smuggling of liquor and other pernicious

things to patients would alone conduce greatly to the successful treatment of patients, remove a constant source of annoyance, and give to the better class of patients a seclusion now impossible by reason of the open character of our grounds. The present ruin is not in keeping with the dignity of the buildings and grounds.

One of the great needs is a building for an electric-light plant for all the hospital buildings. The average gas bills for one year are about \$6,000, and it is difficult to reduce this amount in view of the large number of lights needed in such an establishment, where so many are employed all night. The improvement is not only demanded by the times, but is specially needed in wards occupied by large numbers of sick people. Under the best conditions, great care is necessary in order to keep the air in its greatest purity. The emanations given off by the breaths, secretions, and bodies of patients is great, and the pollution of the air is excessive and constant. This becomes still greater after candle-light on account of the large consumption of oxygen. An ordinary gas-burner consumes as much oxygen as five adults. In some of the wards, the oxygen consumed by the gas-lights is equivalent to twice the amount used by the patients. This means that three times as much oxygen is consumed when the wards are lighted as during the day when no gas is burning. Recent analyses of the air in the wards prove that the amount of carbonic acid gas in the wards during the day-time is constantly low (3.6 per cent.), and with little variation. This percentage rises rapidly after candle-light, and has been found as high as 11.4 per cent., which is near the danger-line, and practically means crowd poisoning. The well-known fact that incandescent light burns "in vacuo," reduces this injurious factor, and makes the air as good by night as by day. Any means that will purify the air for the sick should be used. This is the basis of the scheme of seventy-two beds for the sick in open tents during the summer months. The danger from fire is largely reduced by electric lights. Incipient fires have several times occurred in our history. Fire is the one

great calamity to be dreaded in a large hospital, and any means that can reduce this risk is commendable and imperative. An electric plant should be central, and the boilers might be arranged so as to afford further means of heating the hospital and its future extensions. The thorough consideration of this matter is urged upon the Trustees.

The new wards for contagious diseases (Ward A for scarlet fever, and Ward E for diphtheria) were described in the last official report. They were occupied last February, and have proved successful beyond our expectation. They have been large enough to meet the demands, and, for the first time for several years, a patient with diphtheria or scarlet fever, having a claim on the city, has not been rejected. The ward for scarlet fever has been closed during several months, as there have been no cases. The isolated small South ward has proved a great convenience when there were only six or eight patients, or when it was needed for convalescent cases. The diphtheria ward, however, has been constantly in use, owing to the unusual amount of that disease. The general arrangement of the ward for work has proved to be a good one, and the heating and ventilating has been excellent. The change has been sufficiently rapid to keep the air pure at a high temperature, an object so desirable in this disease. This ward has been of great utility, in view of the large number of cases treated. The epidemic has been one of great mortality, aside from the fact that many cases were brought here *in extremis*.

The following are the statistics in diphtheria for the year :—

	In Hospital Jan. 1, 1888.	Admitted.	DISCHARGED.						In Hospital Jan. 1, 1888.
			Well.	Relieved.	Not Relieved.	Not Treated.	Died.	Total.	
Medical . . .	8	210	102	19	39	1	47	208	10
Surgical . . .	3	161	14	16	0	0	129	159	5
Total . . .	11	371	126	35	39	1	176	367	15

Of 61 tracheotomies, 54 have died ; of 107 intubations, 78 have died ; of 17 intubations and tracheotomies, 17 have died.

The type of cases sent here has been bad, occurring mostly in children, suffering with septic symptoms, or in the last stages of diphtheritic laryngitis. A large number of the patients were from the Italian, Portuguese, and other foreign population, and were hopeless from the time of admission. Heart failure has been a notable symptom, and from all causes forty-eight per cent. have died.

The policy of placing wards for contagious diseases in somewhat close relations with other wards of a general hospital is unquestionably a bad one. The practice of receiving such cases has existed here for many years, and has gradually been forced upon the management, a result not infrequent in a municipal hospital of constantly increasing proportions. I would urge upon your consideration the necessity of asking the City Council to abolish this practice, by establishing a special hospital for the care and treatment of such diseases as scarlet fever, diphtheria, measles, and typhus fever, putting it in charge of the Board of Health, with the same restrictions now used in small-pox. The public sentiment is by no means correct as to the serious character of these diseases in affecting public health. This is specially true of diphtheria, the disease that has prevailed so constantly, and in which the mortality has been so large. The statement that there were more deaths in Boston last

year from diphtheria than from yellow fever during the last epidemic in Florida, is not a fanciful one. This fact, with many others that might be named, goes far to show what a grave source of danger exists in the city. Until the laws and public sentiment permit the same rigid treatment of the diphtheria patient, his household and his habitation, as by general consent is now granted in the management of small-pox, so long this disease will remain with a varying mortality in the community. Until the city is in a position to provide for diphtheria in a more suitable locality, and so long as it must be received here, I recommend that more stringent regulations be made for its care, especially as to visitations of friends, except under extraordinary circumstances.

The Training School for Nurses is now at the close of its eleventh year. At the beginning of the year there were seventy nurses. During the year twenty-two pupils have been graduated. The night supervisor and seven head nurses have resigned to take places in other hospitals or to engage in private nursing. Eight pupils have fallen out on account of illness or want of strength, and, of these, some will undoubtedly return. One pupil was allowed to resign, and one was dismissed for cause. Six graduates have returned as head nurses, three former pupils have been readmitted, and 38 probationers have been accepted as pupils, making 74 nurses at the end of the year.

The superintendent of nurses and her assistants have given 219 formal class recitations from the manuals and text books, and there were 88 classes in massage. The senior nurses have aggregated 231 lessons in sick cookery. The numbers of the Medical and Surgical Staff have given 30 lectures to the school in the operating theatre.

The course of studies, lectures, and various drills has been systematic and regular. These have been formulated, and appears in detail in the Appendix to this report. Certain details as to requirements, regulations, classifications, and studies have been changed; these are noted also. To answer numerous inquiries from other schools concerning methods, many points, not previously printed, have been elaborated

and made clear. Many of these may seem unimportant, but in order to save the labor necessary to answer such inquiries, and to give currency and perpetuate the regulation in vogue, it is thought best to put this information into definite form.

I am under special obligations to the members of the Medical and Surgical Staff who have greatly increased the means of instruction by the very instructive lectures given to the school.

From time to time, especially during the earlier years of school, nurses have dropped out with only a partial course of training. Others have been dismissed as unsuitable, or incapable of making good nurses. Some of these have subsequently engaged in private nursing, and, without the knowledge or training necessary to make good nurses, have reported that they were trained at this school. To vouch, in a measure, for those who have completed a regular course of training here and are entitled to call themselves graduates of this school, the Trustees have established a badge which they desire all graduates to exhibit whenever necessary. A model of the badge, and a list of the graduates to this date, is given in the Appendix.

The nurses, with much fidelity, have given loyal and faithful service during the year, often among cases that were irksome, laborious, and attended with risk.

The Superintendent desires to gratefully acknowledge the kindly interest and devotion shown to patients by visitors to the sick. This service, in public hospitals, is not always a pleasant or agreeable duty. Many individuals, some representing philanthropic organizations, and others moved by love and a friendly spirit, have visited the wards for continuous weeks and months, and by counsel, amusement, and substantial assistance performed beneficent and humane work. The visitations of clergymen and employed visitors have accomplished more than the usual amount of good. Generous gifts of flowers, fruit, reading material, clothing and numerous useful things have been contributed.

My thanks are due to the gentlemen of the Medical and Surgical Staff for advice and assistance. Those associated

with me in the immediate supervision and work of the hospital deserve my sincere and cordial thanks for service given with a faithful and willing spirit. The tension is often great upon the physical strength and moral virtues of officers engaged in the care and management of a household of more than six hundred people, where conflicting or weighty interests are so often involved. Such service and coöperation have contributed much to the success of the year.

In presenting this, my tenth annual report, to the Trustees, I desire to express to them my sense of obligation for the gratifying aid and encouragement they have given me, and the evidence of their continued confidence. Thanking the Trustees for their many courtesies, and trusting to merit their indulgence in the hospital work, now grown to large proportions,

I have the honor to be

Your obedient servant,

G. H. M. ROWE,

Superintendent and Resident Physician.

REPORT OF THE MEDICAL AND SURGICAL STAFF.

MEDICAL DISEASES,

Classified according to the Nomenclature of Diseases, as published by the Royal College of Physicians of London, and American Medical Association.

From Jan. 1 to Dec. 31, 1888, inclusive.

BEQUESTS.

GOODNOW FUND. — ELISHA GOODNOW, of South Boston, who died the year 1851, and whose will is dated July 12, 1849, bequeathed to the city "all the rest and residue of my estate, real and personal, not otherwise disposed of," for the purpose of establishing, in the Eleventh or Twelfth Wards of the city, a hospital for the sick; one-half of said funds to be applied for the establishment and maintenance of free beds, which should always be at the disposal and under the control of the Officers of the Government of said Hospital for the time being. Under this will the city came into possession of certain real estate situated on Cross street, which has been disposed of, and has produced the sum of \$16,500, which has been invested in City of Boston Six per cent. Stock. Also a lot of land on Third street, South Boston, containing $6,683\frac{1}{3}$ feet, which was disposed of in 1867 for \$4,623.25, of which \$4,000 has been invested in City of Boston five per cent. Stock, and the balance (\$623.25) remained in the City Treasury at interest until it amounted to \$1,000, and was invested in a City of Boston Six per cent. Currency Note. The \$10,000 deposited by the Executors of Mr. Goodnow, June 22, 1852, with the Massachusetts Hospital Life Insurance Company, the interest upon which is to be paid to the widow, will, upon her decease, be distributed as follows: —

\$500 to the Penitent Females' Refuge.

\$5,000 to City of Boston; income to be expended for the relief of sick and infirm persons.

\$4,500 to be added to the fund heretofore provided for the support of free beds in the City Hospital.

NICHOLS FUND. — LAWRENCE NICHOLS, who died in September, 1862, made the following bequest to the city: "I give to the City of Boston, towards the establishment and endowment of a City Hospital, in case such Hospital shall have been established at the time of my decease, the sum of one thousand dollars." And in case such Hospital should not have been established by the city at the time of his decease, he directed the same amount to be deposited with the Massachusetts Hospital Life Insurance Company, and suffered to accumulate, by the addition of interest, until such a Hospital should be established.

The executor of the will, Wm. Perkins, Esq., has paid into the treasury nine hundred and thirty-seven dollars and

twenty-five cents (\$937.25), being the amount devised, less the *Internal Revenue Tax* on the same, and \$530.50 as one of the "*residuary legacies in the United States*," from the surplus remaining undisposed of. The \$937.25, with the accumulated interest thereon, has been invested in a certificate of City Stock for \$1,000. The balance (\$530.50) remained at interest until it amounted to \$1,000, and was invested in a City of Boston Six per cent. Currency Note.

NORCROSS FUND. — 1868, January 1. The trustees received the sum of two thousand dollars from Hon. ORIS NORCROSS, as the foundation of a fund for the benefit of patients leaving the Hospital poor and destitute of proper clothing. The principal sum is invested in a City of Boston interest-bearing note, to be deposited with the City Auditor, the interest of which is to be collected annually or oftener, and paid over to the President of the Board of Trustees, for the time being, of the City Hospital, to be by him expended at his discretion for the benefit and temporary assistance of those patients who are in his judgment deserving, and who are destitute of proper clothing in which to leave the Hospital, and having no means of procuring it.

The "Act to incorporate the Trustees of the City Hospitals of the City of Boston" (see Acts and Resolves, 1880, Chap. 174, approved April 7) provides that "money received by it shall be invested by the Treasurer of the City of Boston, under the direction of the Finance Committee of said city; and all securities belonging to said corporation shall be placed in the custody of said Treasurer; provided,

always, that both the principal and income thereof shall be appropriated according to the terms of the donation, devise, or bequest, under the direction of said corporations."

HOUSE RULES.

WITH RULES FOR ADMISSION, DISCHARGES, AND GOVERNMENT OF PATIENTS; ALSO RULES FOR VISITORS.

HOUSE RULES.

All employés shall be in their respective places during the hours of duty.

The doors and gates of the Hospital will be closed at 10 o'clock P.M., at which time all inmates shall be quiet, and all not on duty shall be in their rooms.

A record shall be kept of all persons entering the Hospital between the hours of 10 P.M. and 7.30 A.M.

No employés shall be absent from the Hospital, except as permitted by special rules or by the Superintendent.

The use of tobacco, wine, and intoxicating liquors is prohibited within the Hospital, unless prescribed by a Physician or Surgeon.

All profane and obscene language, loud talking, and incivility are prohibited.

All employés shall observe such further rules and directions for their conduct as may from time to time be established.

ADMISSION OF PATIENTS.

Applications for admission of patients may be made at the Hospital on each day of the week, Sunday excepted, between 9 and 12 o'clock A.M.

Whenever able, the patient shall apply in person. When not able to appear in person, on application made by a friend, the patient may be visited at his residence.

Any Trustee, or either of the Physicians or Surgeons in attendance, may, in case of emergency, send a patient in the first instance to the Hospital by written permit.

Persons accidentally wounded, or otherwise disabled or injured, shall be received at all hours.

Permits for admission shall be subject to the approval of the Visiting Committee, and the Committee shall, except as above, have power at any time to require the Superintendent to report to them the names of applicants before admitting them, and may dismiss any patient whom they think improperly admitted, or change the terms of admission.

Patients may be admitted by the Trustees to the privileges of the Hospital at such rates of board as the Trustees may, from time to time, determine, payment for such board being secured by the friends of the patients or by the authorities of the city or town to which the patients belong.

Whenever, in the opinion of the Trustees, the circumstances of the patient will warrant it, the whole or part of the board shall be paid. If separate apartments or articles not usually furnished at the Hospital are provided, such payment shall be made therefor as the Trustees shall deem reasonable.

No person having acute venereal disease or alcoholism shall be admitted except as a paying patient.

No person shall be admitted to the Hospital whose case is judged to be incurable, unless there be urgent symptoms, which are deemed capable of being relieved.

DISCHARGE OF PATIENT.

Patients shall be discharged by the Superintendent as before provided.

Patients discharged on the recommendation of the Physicians or Surgeons shall be provided with a certificate, stating their condition at the time of discharge, whether cured, relieved, or not relieved, which certificate shall be signed by the Superintendent.

Whenever a patient is removed from the Hospital without the approval of the Superintendent, a written statement to that effect shall be required from any person assuming the responsibility of the removal.

In case of the decease of a patient the Superintendent shall sign the death certificate. He shall also state the time and cause of death, the disposition made of the body, whether delivered to friends or buried from the Hospital, in which latter case he shall mention the place of interment.

The body of any person dying at the Hospital shall not be delivered without a written receipt from the parties taking the same.

GOVERNMENT OF PATIENTS.

Patients shall implicitly observe all the rules of the Hospital.

Patients shall be in their proper places in the wards during the visit of the Physicians and Surgeons, between 2 and 3 o'clock on visiting days, and always by 7.30 o'clock P.M., unless specially excused by the Superintendent.

Such free patients as are able shall assist in nursing, and in such other services as may be reasonably required of them.

No patient shall leave the Hospital grounds without a pass from the Superintendent, nor his ward, without the consent of the nurse in charge.

No patient shall purchase, or cause to be purchased for him, any article of food whatsoever, nor any other article, without the consent of the Superintendent.

Profane and obscene language, loud talking, and incivility are prohibited.

Patients may be visited by clergymen of their own selection, and any wish for the performance of any particular religious rite shall be indulged when practicable.

Complaints, for whatever cause, may be made to the Superintendent or Visiting Committee, and when reasonable shall be by them reported to the Trustees.

VISITORS.

No person shall visit any part of the premises, except on business, or at such times as may be fixed for the reception of visitors, without the permission of the Superintendent, or of some one of the Trustees.

On Monday, Tuesday, Thursday, and Saturday of each week, from 2 to 3 o'clock P.M., friends may be permitted to visit patients, though no patient shall receive more than two visitors on the same day. In all cases, however, the Trustees or Superintendent may exercise discretionary powers as to excluding or admitting visitors.

Patients who are considered dangerously ill are permitted to see friends in reasonable numbers, and at reasonable hours during the day, but friends visiting such patients should not remain later than 8 o'clock P.M., and are not permitted to remain all night unless it seems probable that such patients will not live through the night.

All visitors shall leave the Hospital when the bell rings at the expiration of the visiting hour.

No visitor shall take any meal in the Hospital, or pass the night therein, without permission from the Superintendent or one of the Trustees.

No visitor shall be allowed to give any article of food or drink to a patient, unless by permission of the nurse; and any article sent to a patient shall be left with the Superintendent.

THE BOSTON CITY HOSPITAL

TRAINING-SCHOOL FOR NURSES.

The Trustees of the Boston City Hospital, in 1878, established a Training School for Nurses, in order to give to women desirous of becoming professional nurses a systematic course of training and practice.

The course requires two years, and includes general medical and surgical nursing, together with ophthalmic, aural, and gynæcological nursing, and also the nursing of contagious diseases. Maternity nursing is theoretically taught, but there are no lying-in wards connected with the hospital.

Those wishing to receive such a course of instruction should apply to the Superintendent of the Boston City Hospital.

The most desirable age for candidates is from twenty-three to thirty-five years. They must be of sound health, and should send with their application a certificate from a physician, certifying to the fact. They should also send a brief personal history, and give the names and addresses of three responsible persons not of their own kin who know of their good character and capabilities. Upon the recommendation of the Superintendent and the approval of the Trustees, they will be received for two months on probation. The fitness of candidates for the training and work, and the propriety of retaining or dismissing them, will be determined by the authorities in charge of the school, under the direction of the Trustees.

At the end of the first month, candidates, if considered satisfactory, are permitted to wear the uniform, and enter upon the regular course of training; but such candidates are not permitted to join the school formally until the end of the

second month, when, if accepted, they sign an agreement to complete the prescribed course of two years, and to conform to all rules. At the end of the first six months the record and work of each pupil are carefully scrutinized as to her fitness to make a good nurse, and the right is reserved by the authorities of the Hospital to terminate, then, or any time, the connection of any pupil or nurse with the school for inefficiency, misconduct, generally unsatisfactory record, or for any other reason which may be deemed sufficient.

During the first two months pupils are called Probationers, for the remainder of the first year Junior Nurses, and during the second year, Senior Nurses. Nurses who remain in the hospital after graduation become Head Nurses.

The nurses in the Training School (including Probationers) reside at the Nurses' Home connected with the Hospital, which was specially built for this purpose, and has rooms for sixty-seven nurses. The house affords home-like surroundings, and has the best of conditions necessary to good health and personal hygiene.

The Superintendent of Nurses has the immediate charge of the Training School, under the authority of the Superintendent of the Hospital and of the Trustees, and the nurses are subject to the rules of the Hospital, like any other service.

All nurses are required to be sober, honest, truthful, trustworthy, punctual, quiet, orderly, cleanly, neat, patient, kind and cheerful.

The instruction includes the general care of the sick, the making of beds, changing bed and body linen, managing of helpless patients in bed, etc.; giving baths, keeping patients warm or cool, prevention and dressing of bed-sores, and proper management of the patient under various conditions, with different diseases or injuries; the making and applying of bandages and rollers, preparation of splints, application and management of surgical apparatus; applying of fomentations and poultices, the dressing of burns, ulcers, and wounds, and other minor dressings, cupping, leeching, and subsequent treatment; the administering of enemata and use of the female catheter.

Nurses are taught how to act in the various emergencies occurring in hospital and private nursing, as well as in the accidents of ordinary life. They are also given lessons in elementary *massage* and the application of friction to the body and limbs in the best method. There is a systematic course of training in sick cookery, the serving of food and delicacies in the proper manner, and the feeding of helpless patients, or those who resist food.

Instruction is also given in the best practical methods of supplying fresh air, of warming and ventilating sick-rooms in a proper manner, and the proper care of sick-rooms for the best good and comfort of the patient; in keeping all utensils and appliances perfectly clean and disinfected; in making accurate observations of the pulse, temperature, respiration, expectorations, the secretions, state of the skin and eruptions; of mental condition as to delirium, stupor, shock, etc.; of the condition as to sleep, appetite, effects of diet or of stimulants and medicines; the behavior of wounds, and the after-treatment in surgical operations; and in the managing of convalescents. Nurses are taught the administering of medicines, and the application of external remedies; how to take notes on cases, the making up of the nurse's record, and the reports to the attending doctor.

The course of training includes a fixed course of instruction during the two years from manuals and text-books, mainly given by the Superintendent of Nurses, the Assistant Superintendent of Nurses, and graduate head nurses. Lectures and demonstrations, chiefly upon practical points, are given at stated times by the medical and surgical staff of the Hospital. While the instruction by the manuals, text-books, lectures, demonstrations, quizzes, and models is considerable, the main reliance is upon accurate daily drill in the wards, operating-rooms, and other departments of the Hospital. Examinations, both written and oral, are held from time to time by the authorities of the school and by the Hospital staff, and nurses cannot pass to graduation unless attaining, on critical marking, at least seventy per cent.

The pupils are employed as assistant nurses in the wards,

operating-rooms, and out-patient departments of the Hospital. They are given six months' training in medical wards, and six months in surgical wards; the remainder of the time to be in such wards or departments as the management may appoint.

Probationers are not paid during their first month, but for the remaining months of the junior year they receive ten dollars (\$10) per month, and for the senior year, fourteen dollars (\$14) per month, to pay for the expenses of their uniform, personal clothing, and other minor requirements. This sum is in nowise intended as wages, it being considered that their education during this time is a full equivalent for their services. When the full term of two years is completed the nurses receive, if they pass all the examinations and are otherwise satisfactory, a diploma certifying to the regular course of training and practice, and are then permitted to wear the graduates' badge of the school.

The majority of graduates engage in private nursing, but some are invited to remain in the service of the hospital as head nurses, and receive twenty dollars (\$20) per month for the first year, and after that time twenty-five dollars (\$25) per month, with further opportunities of promotion. Such graduate head nurses as prefer to remain in hospital-work are given post-graduate instructions in ward management, hospital house-keeping, and minor administration.

The school year has no fixed date, but accepted candidates may enter at any time as vacancies occur. They are, as a rule, received in the order of acceptance, but those desiring to enter with less delay can generally anticipate a fixed date by placing themselves on the emergency list. When coming to the hospital they should bring with them the following articles: two or three gingham or calico dresses, made plainly; six large white aprons, made of bleached cotton, with bibs, plain at the top and gathered slightly at the bottom; two bags for soiled clothes; one pair of scissors and a pin ball; a good supply of plain underclothing — every article to be distinctly marked with the owner's name. Twenty-one pieces are allowed for the laundry each week.

Nurses must bring suitable outer-garments for all kinds of weather, and they are required to wear broad-toed and flat heeled boots. If the teeth are out of order in any way, they must receive attention before coming for the probationary month. Nurses are required to wear the training school uniform after they join the school. Material for dresses will be sold at cost price ; caps are furnished free of charge.

Hours of duty for day nurses are from 7 A.M. to 8 P.M. ; for night nurses from 8 P.M. to 7 A.M. No nurse is required to do both day and night duty on the same day, except in rare emergencies. Each nurse on day duty is allowed one hour after 2 o'clock P.M., for rest and recreation, one-half day after 2 P.M. each week, and four hours on Sunday. Two weeks' vacation is allowed each year. If nurses are sick they are cared for in the Hospital, but wages are stopped. Nurses on night duty are required to be in bed until 4 P.M. Nurses may be called upon for four months' night duty during the two years' training.

The following blank form will be furnished to applicants, to be filled in (in the candidate's own handwriting), and sent to the *Superintendent of City Hospital, Boston, Mass.*

QUESTIONS TO BE ANSWERED BY CANDIDATE.

1. Christian name in full of Candidate.
2. Are you single, widowed, or divorced?
3. Your present occupation or employment?
4. Age last birthday, and date and place of birth?
5. Height? Weight?
6. In what school or schools educated? and in what place?
7. Do you speak any language besides English?
8. Are you strong and healthy? and have you always been so?
9. Are your sight and hearing perfect?
10. Have you any physieal defects?
11. Have you any tendency to pulmonary complaint, or any other disease?
12. If a widow, have you children? How many? Their ages? How are they provided for?
13. Are you otherwise free from domestic responsibility so that you are not liable to be called away?
15. Where (if any) was your last situation, and how long were you in it?
15. Have you ever been in any training school or employed in any hospital or asylum? If so, when and how long in each place?
16. The names in full and addresses of *three* persons, not of your own kindred, to be referred to. State how long each has known you. If previously employed, one of these must be the last employer.

THE COURSES OF INSTRUCTION.

JUNIOR YEAR.

- Manual of Hospital Nurses *Domville.*
 Manual of Medical and Surgical Nursing (1) *Cullingsworth.*
 Lectures on Nursing. [Selected chapters.] *Lückes.*
 Manual of Monthly Nursing *Cullingsworth.*
 Lectures on Fever Nursing (3) *Wilson.*
 Handbook of Nursing. [Parts I. and III. (2) "New Haven."
 Critical Review of Dr. F. H. William's three lectures on medicines, administering, etc.
 Critical Review of Dr. Bolles' three lectures on wounds, modes of healing, etc.
 Glossaries, tables, technicals, etc. *Various.*
 A lecture once a week (for thirty weeks) by a member of the Medical and Surgical Staff.
 Instruction in the Wards by Head Nurses and Senior Nurses.

Collateral Reading.

- (1) Medical Nursing *Anderson.*
 (2) Textbook on Nursing *Weeks.*
 (3) On Typhoid Fever *Cayley.*
 (3) Notes on Fever Nursing *Allen.*

SENIOR YEAR.

- Handbook for Hospitals (1) *Woolsey.*
 Physiology, Anatomy, and Hygiene [complete] (2) *Hutchinson*
 General Anatomy [ten weeks], including instruction from
 Charts, Models and the Skeleton *Hartshorne.*
 Notes on Surgery for Nurses *Bell.*
 Notes on Epidemics and Contagious Diseases *Anstie.*
 A lecture once a week [for thirty weeks] by a member of the Medical and Surgical Staff.
 Practical Instruction in Sick Cookery *Boston Cooking School.*
 Practical Instruction in *Massage*. [Eight lessons.]
 Instruction in the Wards by Assistant Superintendent of Nurses, Night Supervisor of Nurses, and Head Nurses.
 Instruction and Drill in the Etherizing, Operating, and Recovery Rooms by the Assistant Superintendent of the Hospital and the Surgeons.

Collateral Reading.

- (1) Notes on Hospital Nursing *Florence Nightingale.*
 (1) Hospital Duties *Lückes.*
 (2) Comprehensive Physiology and Hygiene *Cutter.*

LIST OF LECTURES AND SUBJECTS.

A lecture is given to the Training School on Fridays, at 4 P.M., in the operating-room, by a member of the Medical and Surgical Staff, once a week between Sept. 15 and June 15. The following are among the lectures given:—

Five by Dr. G. W. GAY. — Surgical Dressings: poultices, washes, fomentations, bandaging, splints, leeches and blisters, enemata, surgical hemorrhage, etc.

Three by Dr. Wm. P. BOLLES. — Theory of Wounds: modes of healing, granulations, ulcers, cellulitis, suppuration, sloughs, erysipelas, pyæmia, gangrene, sepsis, etc.

Two by Dr. FRANCIS S. WATSON. — Theory of Sepsis: aseptic treatment, different methods; dressings, with demonstrations and "quiz-drill."

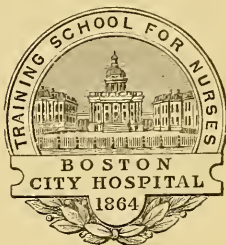

Two by Dr. H. L. BURRELL. — Emergencies: hemorrhage, burns, heat-stroke, fits or seizures, drowning, fractures, immediate treatment of wounds and injuries, foreign bodies in eye, nose, and ear, poisons, domestic emergencies, and practice of expedients.

- One* by Dr. D. W. CHEEVER. — Surgical Operations: care of patient before, during, and after operations; anæsthesia and recovery; accidents, hæmorrhage, shock, especially as in private nursing.
- One* by Dr. E. H. BRADFORD. — Abdominal Surgery: including ovariectomy, herniotomy, operations for abdominal injuries, etc.
- One* by Dr. ABNER POST. — Fractures: varieties, preparation and care of splints and apparatus for treatment, management of cases, etc.
- Three* by Dr. FRANCIS H. WILLIAMS. — Medicines: avenues of taking; preparation and doses; classes of internal and external poisons; cautions; hospital formulæ.
- Two* by Dr. A. L. MASON. — Nursing in Fevers: theory of fever, essential fevers, symptoms and course of, different plans of treatment, nurses' duties as to symptoms, bed, clothing, secretions, baths, food, and management of cases.
- Two* by Dr. C. F. WITHINGTON. — Symptomatology in Disease: What and how to observe accurately; vital organs and special symptoms. The model sickroom: temperature, light, ventilation, care of bed, bedding and clothing, furniture, utensils, disinfectants, cleansing, dusting, etc.
- One* by Dr. GEO. B. SHATTUCK. — Contagious Fevers and Epidemics: symptoms, course and treatment, prevention of contagion, disinfection, care of habitation, etc.
- Three* by Dr. T. M. ROTCH. — Care of Children in Health and Disease: diet and clothing of infants and children; various infantile diseases.
- Two* by Dr. O. W. DOE. — Confinements: before, during, and after delivery; care of mother and new-born child. Obstetrical Emergencies; demonstrations with manikin and child.
- Two* by Dr. C. M. GREEN. — Physiology of Pregnancy and Labor: delivery; confinement nursing.
- One* by Dr. GEO. H. LYMAN. — On Gynæcological Nursing: preparation of patient for examination or operation; operations after treatment, douches, use of catheter, etc. (Demonstrations to sections of senior nurses in Ward S Operating Room.)
- One* by Dr. C. F. FOLSOM. — Special Nursing in Nervous Diseases, including the Insane.
- Two* by Dr. G. H. TILDEN. — Special Nursing in Skin Diseases and Syphilis in the Infant and Adult.
- One* by Dr. H. W. WILLIAMS. — Special Nursing in Diseases of the Eye.
- One* by Dr. O. F. WADSWORTH. — Anatomy and Physiology of the Eye, and General Care in Health and Disease.
- One* by Dr. J. ORNE GREEN. — Special Nursing in Diseases of the Ear, its care in health and disease; nurses' duties at operations and continued treatment in disease.
- One* by Dr. E. M. BUCKINGHAM. — Special Nursing in Croup, Laryngitis, Tracheotomy, etc.
- Two* by Dr. W. W. GANNETT. — Visceral Anatomy: Demonstrations by post mortems; care of the dead, etc.

DONATIONS.

During the Hospital year 1888 the following donations to the Hospital have been received :—

- From MRS. RICHARDSON, Mt. Hope, 20 purses, each containing 25 cents for deserving patients; books, etc.
- From A FORMER PATIENT, "Youth's Companions," toys and cards.
- From MISS MASON, 155 presents for the patients.
- From MR. GEO. A. KENDALL, \$5.00 for the needy patients; also copies of "St. Nicholas."
- From "A LITTLE GIRL," 9 scrap-books.
- From "YOUNG PEOPLE'S CLUB," Unitarian Parish, Jamaica Plain, 3 scrap-books.
- From SUNDAY SCHOOL CLASS, Mr. Loud's Parish, Arlington, 6 scrap-books.
- From MRS. J. N. DENISON, 8 Newbury St., "Littell's Living Age" for 1887.
- From MISS S. E. HOMANS, blackboard and easel.
- From SECOND CLASS of Second Division of Dillaway School, books, articles of clothing, toys, cards, etc.
- From MR. C. E. FOLSOM, gifts for the children.

EXTRAS. — In addition to the above, the following extras may be ordered by the Visiting Physicians and Surgeons: Milk, Beef Tea, Chicken Broth, Mutton Broth, Gruel, Oatmeal Mush, Corn Starch, Boiled Rice, Eggs, Beefsteak, Mutton-chop, and Chicken.

A small allowance of Milk and Beef Tea will be provided for each ward daily. The House Physician or Surgeon may order these articles by a signed special order, in each case, when needed, for patients who enter in the intervals between the regular visits of the Visiting Physician or Surgeon to whom the case is assigned.

All Wines and Liquors, Ale, Beer, etc., will be ordered by the Visiting Physicians and Surgeons only, excepting in emergencies, when special orders for the same may be given by the House Physician or Surgeon, to be afterwards approved by the Visiting Physician or Surgeon, as the case may be, or by the Resident Physician.

By Order of the Board of Trustees.

JULY 2, 1878.

(Dec., 1888, 20,000)

BOSTON PUBLIC LIBRARY.

One volume allowed at a time, and obtained only by card; to be kept 14 days (or seven days in the case of fiction and juvenile books published within one year) without fine; not to be renewed; to be reclaimed by messenger after 21 days, who will collect 20 cents besides fine of 2 cents a day, including Sundays and holidays; not to be lent out of the borrower's household, and not to be transferred; to be returned at this Hall.

Borrowers finding this book mutilated or unwarrantably defaced, are expected to report it; and also any undue delay in the delivery of books.

***No claim can be established because of the failure of any notice, to or from the Library, through the mail.

The record below must not be made or altered by borrower.
